

# Case study: Masterplan & detail planning in Logistar

Increase of efficiency in a fulfillment center in Serbia – status: purchase and implementation stage on-going

chaingers

## Client

More than 15 years of experience in fashion logistics, home appliances, furniture. Logistics company that offers full 3pl service:

- International & Domestic Transport
- Distribution
- Customs Clearing
- Warehousing
- E-commerce

## Challenge

Choosing appropriate technology for sorting process (considering sorted items types, required capacity and efficiency etc.) and Masterplan for sorting area in the warehouse including connection with picking areas (mezzanine, racks).

## Project

The technological and process concept of the sorting zone in combination with the decision to select the technology to achieve the assumed goals, planning the sorter's area and combining it with other existing areas in the warehouse, preparation of tender documentation and assistance in selecting the best supplier, support in project management at the implementation stage. The concept also includes plans to implement new services offered in the future. The estimated investment budget is several million EUR.

## Result

Appropriate sorting technology chosen and deployed supports further company growth. Capacity of 60.000 units shipped per day.
